

Maricopa Institute of Technology (MIT) Summary of Active & Inactive COVID-19 Cases

This page reports known cases of COVID-19 school wide since June 26, 2021. It also includes all known active cases in the last 14 days at MIT.

Updated approximately every Monday and Thursday afternoon. Last updated: January 12, 2022.

Disclaimer

Maricopa Institute of Technology will always be transparent about the community spread of COVID-19 within our boundaries. Below you will find aggregate data reported by the Maricopa County Health Department and MIT of the number of positive COVID-19 student and staff cases reported.

It is difficult to determine total positive cases if, for example, an individual experiencing symptoms does not get tested or an asymptomatic individual is not tested.

Also, the report of positive cases is not indicative of an individual contracting COVID-19 at our site. In all listed cases, if the individual was physically on campus, all contact tracing, quarantining, and sanitation protocols have been followed.

- MIT Jr. High Students are included

Positive Cases at MIT

School	Number of Current Positive Cases	Total Number of Cases	Total Number of Individuals at School/Site
Maricopa Institute of Technology	2	41	423
